

MEASURE OF CENTRAL TENDENCY

PLACEMENT DATASET

Univariate analysis was performed on the placement dataset to measure the central tendency that is **Mean, Median, Mode** to identify the relationship between **Academic scores and Salary** for a total of 215 students.

]:	sl_no	ssc_p	hsc_p	degree_p	etest_p	mba_p	salary
Mean	108.0	67.303395	66.333163	66.370186	72.100558	62.278186	288655.405405
Median	108.0	67.0	65.0	66.0	71.0	62.0	265000.0
Mode	1	62.0	63.0	65.0	60.0	56.7	300000.0

1. MEAN

- The mean scores of the students are **67.3%** in secondary, **66.3%** in higher secondary, **66.3%** in degree, **72%** in entrance exam and **62%** in MBA.
- This shows that the academic performance of the students are average.
- Therefore, average salary of average academic performing students is **Rs. 288,655.40**.

2. MEDIAN

- The median scores of the students are **67%** in secondary, **65%** in higher secondary, **66%** in degree, **71%** in entrance exam, **62%** in MBA and **Rs.265,000** salary.
- The median values shows that half the students have performed above average and half the students have performed below average in the class.
- So, half students salary is higher than median salary of Rs.265,000 and half the students salary is lesser than the median salary.

3. Mode

- The mode scores of the students are **62%** in secondary, **63%** in higher secondary, **65%** in degree, **60%** in entrance exam, **56.7%** in MBA and **Rs.300,000** salary.
- Mode values shows that many students get a **salary of Rs.300,000**.
